

Quick Start Guide

Everything you need to run a session, capture your speeds, and send the report to Yusuf. Should take 2 minutes to read.

1. OPEN AND PIN THE TIMER

Visit thefightingphysiotherapyclinic-prog.github.io/TFP-Timer in your phone's browser. The first time you open it, save it to your home screen so you don't have to find the link each session.

1

iPhone (Safari)

Tap the Share icon at the bottom of the screen → scroll down → 'Add to Home Screen'.

2

Android (Chrome)

Tap the menu icon (three dots) → 'Install app' or 'Add to home screen'.

First time only: log in with your name and email. The timer remembers you after that.

2. RUN YOUR SESSION

Pick the session I've assigned you for the day, hit play, and follow the on-screen target speed. The timer talks you through work and recovery periods, with a halfway shout and a 10-second warning on longer work blocks. Two icons in the top corner toggle the voice cues and the ambient background tone if you want either off.

Timer running on a work interval. The ring counts down, target speed shows below, and 'Up Next' shows what's coming.

3. CAPTURE WHAT YOU ACTUALLY DID

During recovery between work blocks, a green box pops up asking what speed you held. Two flavours, depending on the session:

Range targets (e.g. Tempo blocks): tap one of three buttons — ↓ **Below**, **In range**, ↑ **Above**.

Tapping **In range** gives you a row of speed buttons to pick the exact value. Tapping **Below** or **Above** opens a number field for you to type your actual speed.

MAX targets (sprint sessions): no buttons — just type the peak speed your treadmill display showed during that sprint.

The capture box appears in the recovery period after a work block. Tap one of the three options.

Tapping Below or Above opens a number field for you to type your actual speed.

Don't worry if you miss one.

If you can't tap during recovery, the summary screen at the end will show every block you didn't capture and let you fill them in there. Either way, the data ends up with me.

4. FINISH UP

When the last interval ends you'll see a summary screen. Three things to check before sending:

- All speeds filled in (any captured during the session will already be there — just confirm or fix).
- Confirm the incline you actually ran at (it pre-fills with the target value).
- Tap the RPE you'd give the session out of 10, and add a quick note if anything's worth flagging — felt sluggish, niggle in a hip, slept badly the night before.

Send to Coach

Start New Session

Scroll down to confirm the incline you used, then tap Send to Coach.

5. SEND THE REPORT — THE MANUAL BIT

Tap Send to Coach. Two things will happen at once:

A

A zip file downloads to your phone

It'll be named something like

TFP_Surname_SessionName_2026-04-28.zip

B

Your mail app opens

The email is already filled in with the recipient (me), the subject, and a written summary in the body. You only need to do one thing before sending.

ATTACH THE ZIP FILE BEFORE YOU HIT SEND

This is the only manual step. The email body alone won't give me what I need — the zip contains the proper data file I use to track your progress.

6. HOW TO ATTACH THE FILE (LAPTOP OR DESKTOP)

If you've sent your session from a laptop or desktop, the zip lives in your Downloads folder. Here's the flow with Outlook:

1

Open the email

It'll already be addressed to me with the session report in the body.

2

Click the paperclip icon

In Outlook, the paperclip icon is in the formatting toolbar. Click it → 'Browse this computer'.

Outlook's paperclip icon → Browse this computer.

3

Find the zip in Downloads

It'll be the newest file in Downloads. Filename starts with TFP and includes your name and session.

The zip file in your Downloads folder.

4

Confirm it attached, then hit Send

You'll see the file as a chip below the subject line. Hit Send.

Email with the zip attached — ready to send.

7. HOW TO ATTACH THE FILE (IPHONE OR ANDROID)

If you're on your phone, the flow is similar but the screen is smaller. After Send to Coach opens your mail app:

- In iPhone Mail or Outlook: tap inside the body of the email → a toolbar appears above the keyboard → tap the paperclip or document icon → Browse → Downloads → tap the zip.
- In Gmail: tap the paperclip at the top of the email → Attach file → Downloads → tap the zip.
- Make sure the zip shows attached below the subject line, then hit Send.

8. IF SOMETHING GOES WRONG

Can't find the zip? On iPhone, open the Files app → tap Browse at the bottom → tap Downloads. The newest zip is at the top. On Android, pull down the notification shade — a download notification usually has a tap-to-open. Or open the Files app → Downloads.

Mail app didn't open? The timer will show an amber box with my email address (yusuf@thefightingphysiotherapyclinic.com) and a one-tap copy button. Open whichever email app you actually use — Gmail web, Outlook, whatever — paste my address, attach the zip from your Downloads, and send.

Tapped Send and nothing happened? Check your phone for the downloaded zip — it almost certainly worked. Open whatever email app you have, attach the zip, paste in my address, and send manually.

Voice cues not playing? Check the speaker icon in the top-right of the timer. The icon next to it controls the ambient background tone separately.

9. QUESTIONS OR ANYTHING WEIRD

This is a fresh build so it'll have rough edges. If anything's confusing, doesn't work, or just feels off in normal use, message me — I'd genuinely rather hear about it than have you struggle in silence.
